

PSIP Design Internship

About the Company

Time Series data is everywhere, and Timescale is helping developers and companies make sense of it.

Businesses worldwide trust TimescaleDB for mission-critical applications from industries as varied as manufacturing, finance, utilities, telecom, mining, ad tech, oil & gas, and the smart home. Applications built on TimescaleDB include complex monitoring systems, IoT, industrial machine data analysis, geospatial asset tracking, operational data warehousing, and financial risk management; via the edge, on-premise, and cloud deployments.

Internship Description

Our design internship at Timescale will expose you to real-world, hands-on design experience with our designers and front-end developers.

You will have the opportunity to learn about:

- Design systems - creation and management
- Branding
- Marketing campaigns
- Workflows and development handoff
- Tools of the trade

Challenge Puzzle

Thanks for your interest in the Timescale Design Internship position!

Using any design tool of your choice, we invite you to critique our [Company newsletter](#). Please annotate elements that are working and changes you'd implement to make it more effective, inviting, and aesthetically pleasing.

We thank you for taking the time to complete this challenge puzzle and look forward to reviewing your submission. If you have any questions at all, please send an email to us at design@timescale.com.
